

TECHNICAL DATA SHEET

PRIMUS Bio→Pharma® – Large Steam Sterilizers

These sterilizers are for customers who require a high quality steam pressure sterilizer whose products, operations and manufacturing facilities are regulated by the FDA. PRIMUS Sterilizers, designed and manufactured in the USA according to Quality Management Systems, are in compliance with ISO9001:2000, ISO 13485 and FDA's Good Manufacturing Practice (GMP) for Medical Devices: General Regulation (21CFR Part 820). Large size sterilizers are one of 19 standard sizes manufactured by PRIMUS, or we can custom manufacture a sterilizer to meet your specifications.

STERILIZER DESIGN

PRIMUS Bio→Pharma® sterilizers are designed for a wide range of sterilizing applications suitable for the laboratory or pharmaceutical industry. Quality materials and workmanship have been incorporated into the chamber, piping and controls to provide a pharmaceutical sterilizer that exceeds industry standards. Bio→Pharma® sterilizers are designed for fully automatic, computer-controlled, operations with vacuum or gravity displacement cycles for terminal sterilization to in-process sterilization of packaging components to production equipment sterilization. Bio→Pharma® sterilizers are the choice when versatility, rigorous tolerances and validatable results are essential. The sterilizer is designed, manufactured and tested at the PRIMUS Bio→Pharma® factory in Omaha, Nebraska USA.

All large sizes of PRIMUS sterilizers have pneumatically powered horizontal operating doors, designed to be efficient, reliable and inherently safe. To close the door, press and hold the door button, if button is released before door is fully closed the door

opens. An added safety feature, the doors stop automatically if an obstacle is encountered.

STERILIZER CYCLES

Standard cycles can be configured through the use of the cycle parameters to process hard goods, wrapped goods or liquid type products. Configuration of the cycle parameters (i.e., number of PRE or POST-PULSES, EXHAUST & DRY, etc.) is unique to each cycle and depends upon the specific product being sterilized. Standard cycles can be designed for steam sterilization of various types of dry goods or liquid products. Dry good products such as filter housings and cartridges, textiles, rubber stoppers or sterilizable plastic packaging may require preconditioning for air removal from the top of flasks. A slow exhaust is used for liquid products with Jacket Off and Flow Cooling selected after exposure to reduce boil-over.

PRIMUS Pri-Matic® controls offer the user access to thirteen password-protected cycles. Cycle parameters for each cycle are baselined, validate and "locked" by validation personnel. Cycle can be custom named to assist and confirm operator selection of correct cycle.

PURCHASING SPECIFICATION DATA SHEET

TECHNICAL DATA SHEET

GENERAL (Options italicized)

All models include Vacuum, Gravity and Liquids cycles.

VESSEL MATERIAL AND CONSTRUCTION

The sterilizer features a SA240 TY316L stainless steel (SS) rectangular, horizontal completely jacketed chamber, with fully radiused longitudinal corners which are fully welded and mirror polished to provide the most hygienic, long lasting appearance and durability available. The chamber has a full-length baffle and one drain positioned in the chamber to maximize steam distribution and cross flow within the chamber.

J	26"x63"x48"	N	35"x57"x86"
K	26"x63"x78"	O	49"x57"x86"
L	35"x57"x48"	P	49"x86"x86"
M	35"x57"x60"	Q	61"x86"x86"

The jacket is constructed of SA240 TY304 SS and is mounted to the chamber over channel supports designed to achieve uniform distribution of steam. The jacket enables the stabilization of temperature around the chamber thereby reducing the time required to bring the chamber up to sterilization temperature, providing superior temperature distribution, and preventing the formation of condensation on the chamber walls.

DESIGN and MANUFACTURING APPROVALS

The vessel will be designed and constructed to ASME code Section VIII Division I and pressure rated for 45 PSIG and full vacuum. ASME Code Stamp and U-1 form will bear the name of the specified US manufacturer.

The sterilizer will be manufactured according to Quality Management Systems which are in compliance with ISO 13485 and 9001:2000, will be UL listed and in conformance with CSA requirements.

DOOR CONSTRUCTION

A pneumatically operated horizontally sliding door will be operable from the touchpad push button. To close door, depress/hold door button. If door button is released while door is closing, door reverses direction and opens. In the open position, the insulated door will be secured behind a panel preventing the operator from contact with hot surfaces. An interlock will prevent cycle start unless the door is fully closed and secured.

GENERAL CONSTRUCTION

The vessel will be insulated with 1" semi-rigid high temperature fiberglass board/blanket insulation overlaid with formed aluminum paneling and mounted in a structural steel frame. The frame will be enamel coated and fitted with adjustable legs on self-centering floor pads. The fascia and side panels will be 16-gauge, type 304 stainless-steel,

EQUIPMENT WARRANTY

Sterilizer pressure vessels manufactured by PRIMUS are warranted against defects in workmanship and materials under normal use and operation for fifteen years where the sterilizer is continually maintained under PRIMUS service contract.

SERVICE and EQUIPMENT ACCESS

Standard service access, when facing the unit, will be from left side and top. Wiring will be laid side-by-side and mechanically secured flat against the metal insulation cover. All wiring will be clearly labeled and readily visible for visual tracing. All sterilant piping in the product contact circuit is composed of stainless steel with high quality CLEAN IN Place (CIP), flanged, sanitary fittings. Sanitary pipe clamps are located anywhere CGMP Procedures require frequent maintenance access to process piping to allow ease of routine cleaning and maintenance. Wiring and piping components will be non-proprietary, industry grade, available through Authorized Service Agencies, local supply house, or direct from PRIMUS.

STEAM SOURCE

Steam will be from an in-house steam source in the quantity and quality specified. *Optional electric steam boiler, clean steam boiler or steam-to-steam generator may be specified. Contact PRIMUS for specific boiler information.*

CONTROLS

The Pri-Matic® Control System uses the Allen-Bradley SLC500 Programmable Logic Controller (PLC) with an Allen-Bradley Panel View 1000 Operator Interface Terminal (OIT) and the Pri-Matic® software package to provide automatic cycle operation. The control system hardware is mounted within a separate control cabinet. The system features Pulse Width Modulation (PWM) temperature control. The PLC software meets or exceeds industry standards, is fully documented, validated and maintained under strict configuration control.

PRI-MATIC® CONTROL PANELS WITH PRINTER

HVAC DATA Heat loss, at ambient of 70° F.

MODEL	N	O	P	Q
Chamber Size (w x h x l) inches/millimeters	35 x 57 x 86 889 x 1448 x 2184	49 x 57 x 86 1245 x 1448 x 2184	49 x 86 x 86 1245 x 2184 x 2184	61 x 86 x 86 1549 x 2184 x 2184
Pit Depth	12.00 / 304.8	12.00 / 304.8	12.00 / 304.8	12.00 / 304.8
Pit Length (SD)	99.00 / 2514.6	101.00 / 2565.4	101.00 / 2565.4	101.00 / 2565.4
Pit Length (DD)	97.00 / 2463.8	97.88 / 2486.5	98.50 / 2501.9	98.50 / 2501.9
Pit Width	98.00 / 2489	130.00 / 3302	138.00 / 3505.2	165.00 / 4191

NOTE: The industry has set 12" as an acceptable pit depth dimension. PRIMUS recommends 12" to 18" depending on the sterilizer size specified to facilitate easier serviceability and maintenance.

ARCHITECTURAL NOTES:

1. Allow sufficient space for traps, shut-off's, filters and other utility supply components.
2. Utility (service disconnects) shall be provided and installed "By Others".
3. Building or structure modifications to accommodate the sterilizer, as well as, sterilizer shoring, rigging, cribbing and/or crane requirements into the facility shall be provided "By Others".
4. Provide maximum mechanical and service access space, a minimum of 24", additional space required when boiler specified. See General Arrangement drawing for placement of ancillary equipment and service access.
5. Some options affect utility services and overall dimensions.
6. Water Quality - Refer to page 12.
7. The Manufacturer's Equipment Warranty does not cover failure due to improper utility provisions.
8. Drawings not to scale.
9. Wall thickness must be provided on single and double door models recessed through 1 wall, with cabinet sides.
10. Electric Vacuum Pump is standard on Models N, O, P and Q.
11. Floor under sterilizer must be water tight and sloped to the drain.

UTILITY SERVICES

Provide utility services within 6'-0" of final connection to sterilizer. Optimum sterilizer performance requires the specified utilities.

MODEL	STEAM (S) Building Steam Supply . Pipe Size: 1" Sanitary*		STEAM (S1) Building Steam Supply . Pipe Size: See Below . Quality: Condensate free 97% to 100% saturated vapor (suitably trapped to ensure dry steam and filtered to remove particulates) . Pressure: 50-80 PSIG Dynamic		WATER (W) Cold Water Supply . Pipe Size: See Below . Temperature: < 70° F . Pressure: 50-70 PSIG Dynamic		DRAIN (D) Building Drain System Minimum 2" . Location: Locate floor sink in service area Note: 1.) ELECTRIC BOILERS

BEBC Electric Heated Boiler - Stainless steel construction for clean steam generation. Includes stainless steel feedwater boost pump.

NOTE: Stainless Steel Boilers shall be operated using only deionized water, having a maximum conductance of 1 microSeimen per cm (1 μ S/cm) [minimum specific resistivity of 1 megohm per cm (1MW/cm)].

N/A - Not Available

STEAM TO STEAM GENERATOR (SCS1 & SCS2)

Steam to Steam Generator used to generate either clean or pure steam. The preferred method of generating Clean or Pure steam, when house steam is available to drive the generator. Converts to steam, whatever quality water is delivered.

BSCS1 Pure Steam - stainless steel steam to steam generator with sanitary fittings, double tube sheet construction. Generated from WFI quality depyronated water. The water source to the Pure Steam Generator is either house generated or "By Others".

BSCS2 Clean Steam - stainless steel steam to steam generator with threaded fittings, threaded connections and single tube construction. Generated from distilled or reverse osmosis water. Clean Steam sterilizers normally include stainless steel piping for all wetted surfaces in the product loop.

NOTE: Refer to Page 12 for information on Water Quality.
 Refer to the boiler/steam to steam generator maintenance manual provided with the sterilizer prior to using any boiler treatment chemicals.
 Contact PRIMUS for further recommendations.

Use the following pages to custom design your sterilizer by checking the boxes of the configuration and options required for your project. Transfer all items checked to the Specification Worksheet (Pages 19 & 20) and fax to PRIMUS Sales Department or to your local Sales Representative for a quotation. If you do not find an option or size listed to meet your requirements, please contact our Project Manager for additional information and assistance.

Model Number Notation

SD = Single Door
DD = Double Door

|---|---|---|

1. Electric boilers are available in Carbon Steel or Stainless Steel.
2. Contact PRIMUS for overall dimensions and utility connections.
3. All models are stand-alone.
4. GMP Validatable Option Only, sanitary piping required.
5. Low Water Cutoff is standard and the "automatic reset" feature is disabled with this option. The boiler will need to be manually rest.
6. Water Quality - For best results, feed water supply should be evaluated prior to initial startup to ensure it is of the quality necessary for the application, various external treatment processes (water softener, water conditioning, etc.) may be used. Contact PRIMUS for further recommendations.

PHARMACEUTICAL CONFIGURATIONS

Clean Steam Sterilizers BP9

For cell/tissue culture applications. This option provides direct connection to a house-source of clean steam. Includes threaded stainless piping and components to chamber. If clean steam is only steam source, specify option BP9.1 for stainless piping to jacket. For alternate sources to generate clean steam, specify electric clean steam boilers (stainless steel), or when house steam is available, specify steam-to-steam generators. (Stainless steel heat exchanger).

BP9	Stainless piping to chamber - threaded
BP9.1	Stainless piping to jacket - threaded
BEBC	Clean Steam Stainless Electric Boiler (specify voltage)
BSCS1*	Pure Steam Double Tube Sheet, Sanitary Connections
BSCS2*	Clean Steam Single Tube Sheet with threaded connections
BSCS3*	Clean Steam Single Tube, Sanitary Connections

*Contact PRIMUS for alternate steam generator options.

Air-over Cooling BP11

Provides a means of rapidly cooling sterilized load. Effective to decrease cycle times with liquid loads. Filtered ambient air displaces steam during exhaust cycle to rapidly cool load and prevent boil-over.

CLEAN-IN Place Piping BP15

CLEAN-IN Place (CIP) piping is standard for all piping in the product contact circuit. CIP piping has an interior finish <25 μ Ra.

Control Cycle on Load Temperature BC24

Use to establish the most beneficial cycle temperature and exhaust rate parameters. Monitors and controls the load temperature. Use to establish best parameters for liquid loads and for loads with complex geometries and a tortuous path for steam penetration.

Note: See additional Bio-Containment Options

CONTROLS AND RELATED OPTIONS

(Contact PRIMUS for details and performance specifications)

PSS6 Pri-Matic® Control BC1

Pri-Matic® Control System PSS6 uses the Allen-Bradley SLC 500 Programmable Logic Controller (PLC) with an Allen-Bradley Panel View 1000 Operator Interface Terminal (OIT) and the Pri-Matic® software package to provide automatic cycle operation. Pri-Matic® shall offer a total of fifteen (15) cycles, with thirteen (13) standard cycles available for product sterilization. Standard cycles are configurable by modifying the cycle parameters for each. Two dedicated cycles are available for performing vacuum leak test and sterilize filter.

PSS7 Control System BC1.1

PSS7 uses the Allen-Bradley ControlLogix PLC with Ethernet connectivity and PanelView Plus OIT in place of the SLC500 PLC and standard PanelView. ControlLogix provides graphical color touch screen capability, real time process graph, active Plumbing & Instrumentation Diagram (P&ID) screens and the ability to standardize control systems throughout a facility. PSS7 offers a total of fifteen (15) cycles with thirteen (13) standard cycles available for product sterilization. Standard cycles are configurable by modifying the cycle parameters for each. Two dedicated cycles are available for performing vacuum leak test and sterilizer filter.

PSS8 Trinity Control System BCT

PSS8 microcomputer with a selection of twenty-five (25) separate programs for sterilization of wrapped goods, hard-goods, liquids and test cycles. Trinity Controller has a color touch sensitive screen with 30 line x 40 character display mounted on the front fascia with a thermal printer. Help screens for programming and trouble shooting alarm conditions. Cycle data can be printed, captured to a remote personal computer or logged to memory.

Sterilization Based on Accumulated F₀ BC2

When sterilization based on accumulated heat lethality F₀ is selected, exposure length is based on a settable value for the total accumulation of F₀ during the charge and exposure phases. The accumulated F₀ value must be reached before the sterilization phase is completed.

Supervisory Control and Data Acquisition (SCADA) System BC8

The optional SCADA Interface provides the end user with a structured data format which can be easily interfaced with control room processes.

Remote Record of Run Data BC11

Supervisory use to capture electronic record of each sterilization cycle. Cycle hard copy and display data is transmitted via RS232 in real time to remote computer, up to 100 feet away, for display and recording. Hard copy records may be printed from the computer. Available on both control systems.

CONTROLS AND RELATED OPTIONS (CONT'D)

- Sterilize Filter Cycle BC13**
Sterilize filter is a stand-alone cycle used to sterilize the 0.2 micron sterile air filter, filter housing and related piping.
- Authorized Operator Access BC32**
Restricts operation of sterilizer to authorized personnel and provides supervisor with PIN number of person running the cycle. Access levels are available for administrator, supervisor and operator level groups.
- Remote Mount Control Panel BC10**
Mount control panel in separate housing adjacent to or up to 100 feet away from the sterilizer. Available on both control systems.
- Thermal Printer BR7**
Thermal dot-matrix printer with take-up reel and 32 characters per line printing is standard. Second sterilization cycle report available at the end of the run.

BIO-CONTAINMENT OPTIONS

- BioSeal Flange BV6**
Provides a means of isolating load from the unload ends of the sterilizer. A vapor-proof flange is welded to the vessel on both sides of the flange and around its full circumference. Penetrations through the flange for electrical and piping components are secured with vapor proof fittings. Optional on single door units, standard on double door units.
- BioSeal Panels BV7**
Aluminum panels for attachment to, and extending from, the BioSeal Flange to adjacent building surfaces to complete the barrier between either end of the sterilizer.
- | | | |
|--|------|-------------------------------------|
| | BV10 | Stainless steel in lieu of aluminum |
|--|------|-------------------------------------|
- BioSeal Fully Welded Box BV11**
Provides a fully welded stainless box, welded to the BioSeal flange forming the complete BioSeal. Check proposed installation site. Install into wall opening with end-opposite box BioSeal, first. For double-door pass-through model B requiring a Box BioSeal and a boiler, specify a stand-alone boiler .
- Conax Adapter BC5**
Provides two (2) 316L SS CIP chamber penetration, for validation purposes. Conax Adapter provides a compression gland inside the port, through which 1-24 thermocouple leads are fed to the chamber interior.
- Remote Signaling of Sterilizer Status BC23**
Control relay connection enabling operation of a remote signaling devise for an alarm condition. Alarm conditions many include Door Open, Door Closed and Cycle complete. Signal may be used to activate a buzzer, light or any other On-Off device.
- Compress Air to Gasket BP10**
Compressed air is used to seal gasket against door interior during cycles on Bio→Pharma® sterilizers. Prolongs gasket life. Requires compressed air utility service, or option BEAC air-compressor. Optional steam to gasket is available.

GENERAL OPTIONS

Validation Port, 2 inch BV5

Provides chamber penetration to accommodate various monitoring/control probes. Standard on B, C, and D models.

Seismic Restraints BV8

Required in areas prone to seismic hazards. Secures sterilizer to building but allows for leveling. Designed to current California Code.

Electric Vacuum Pump BP4

A water-sealed electric vacuum pump is standard on sanitary sterilizers providing a vacuum, in lieu of the standard water ejector on non-sanitary sterilizers. Check PRIMUS' General Arrangement drawing to assure the required ancillary equipment space is provided.

Drain Line Strainer/Valve BP25

Provides a means to trap and expel debris from the chamber drain line to protect heat exchanger from damage.

Floor Mounted BFM

Replaces standard Pit Mount. Special order 'Floor Mounted' with ramp or carriage/cart.

Air Compressor BEAC

For small size sterilizers, (less than 75 cu. ft.), air compressor mounted on sterilizer frame, for use when house supplied air is required but not available. Not available if Air-Over Option BP11 is specified.

UTILITY - STANDARD FEATURES

Quench Effluent on Demand to Drain BP6

Assures effluent exhausted to drain is 140°F or below, provides quench water for exhaust effluent only on demand, to conserve water. Standard on all units.

Stepping Transformers BE1

Reduces line voltage to required 110 VAC for operation of sterilizer controls.

BE1A	220 vac to 110 vac
BE1B	480 vac to 110 vac
BE1C	480/240/240/120, 1 phase, 0.5 KVA

Uninterruptible Power Supply BE2

In the event of electrical power loss and no emergency electrical power to sterilizer, this option provides electrical power to operate control system for up to 30 minutes, to complete the cycle. This option is dedicated power source for the electronic controls only and will not supply any power requirements for heavy power load components (boiler, pumps, compressors, etc.).

Chilled Water Recirculation (Conservation System) BP24

Provides water conservation through the use of Chilled Water versus City Water to cool drain effluent. Additional water conservation is provided by reusing the cooled drain effluent for the water ring seal on the vacuum pump.

LOADING EQUIPMENT

Loading cart includes one bottom and one intermediate shelf with four adjustable levels. Additional shelves are available. Cart frames and shelves are 316L stainless steel welded, ground and polished. Shelf surfaces are stainless steel wire mesh. Transfer carriages include swivel casters with swivel locks and 5" wheels with wheel brakes. Loading cart and transfer carriages are recommended for chamber lengths greater than 48". Pit Mounted units with chamber length equal or great than 60" use one set of 2 floor carts.

BL4	Loading Cart
BL5	Additional Cart Shelf
BL6	Transfer Carriage
BL7	Floor Cart
BL8	Additional Floor Cart Shelf

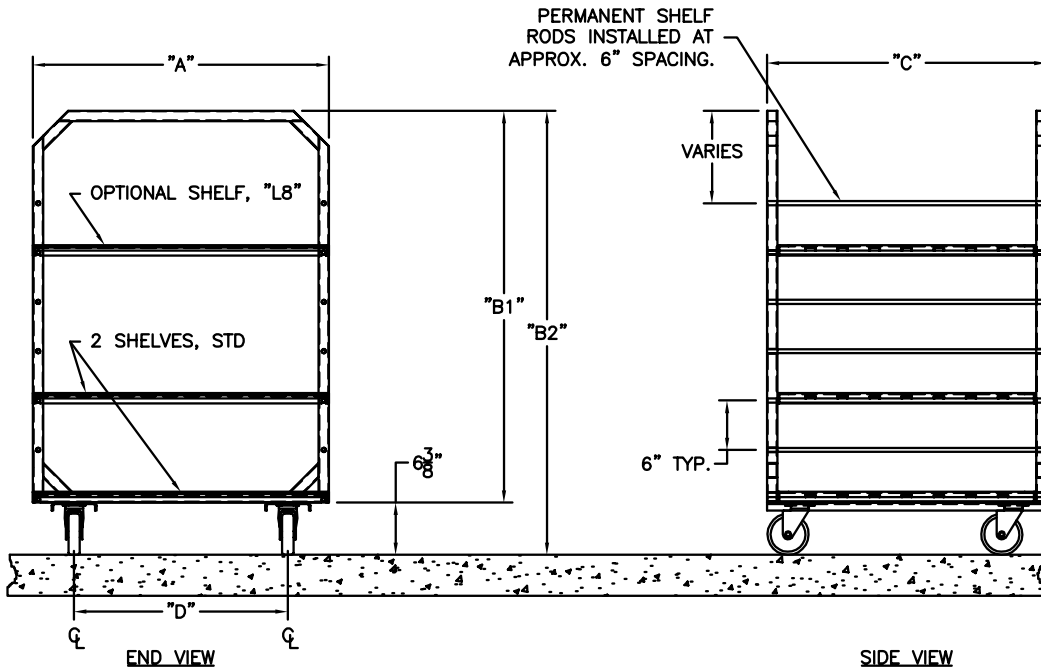

NOTE: Loading cart and transfer carriages are recommended for chamber lengths 48 inches or longer. Pit Mounted units with chamber length equal or greater than 60" use one set of 2 floor carts.

Contact PRIMUS for special loading equipment requirements. Existing loading equipment may be able to be retained, contact PRIMUS for more information.

The PRIMUS Difference:

- Quality and Innovation – Dedicated to sterilizers for over 25 years.
- Steam Sterilizers are Our Only Business – Proud to be the only major steam sterilizer manufacturer specializing in Steam Sterilizers
- ASME Certified Pressure Vessel Factory – Being the owner of our ASME shop ensures highest of quality and faster deliver times
- USA Designed and Manufactured
- 19 Standard Sizes, Custom Sizes Available
- Steam Sterilizer for Every Need – From Basic Sterilization to Hazardous Waste, to Validatable Pharmaceutical and Bio-Critical Applications
- Engineered the Service Out of Sterilizers – “Making it one of the easiest in the industry to service” per our Authorized Service Agents and Customers
- Simplicity of Design – less parts to fail
- Non-Proprietary Components – Lowers the cost of ownership, minimizes down time and provides a more efficient meantime repair
- 304 Stainless Steel Fully Jacketed Vessel (no laminates) – reduces heat-up time and loss of temperature, providing greater uniformity of chamber temperature
- Rectangular Chamber - eliminating wasted space and high utility cost
- Sliding Doors: Inherently safe doors – seal integrity. Not a burn hazard
- PRIMUS Controls with “Evergreen Migration” meaning the hardware and software is continually supported lowering total costs of ownership – All controls offer multiple options on 4 different control platforms. Through constant improvements and development PRIMUS Controls remain a leader in the industry. Simple to operate, reliable and versatile.
- Vacuum, Gravity, Liquid and Test Cycles - Standard on all Sterilizers
- Pri-Mirror® Chamber Finish – Most sanitary in the industry. Providing a mirror finish of <10 Micro Inches Ra, the result is a non-porous surface easy to clean and hostile to microorganism
- Independent Dealers, Sales Representatives and Authorized Service Agents Worldwide – offering the most coverage and flexibility
- Customer Service - Important part of PRIMUS offered through our Authorized Service Agents or directly from PRIMUS’ Service Department
- Turn Key Operation – from planning to installation to start-up and training
- FDA, ISO 9001:2000, ISO13485-2003; UL Listed, ASME Section VIII Division I, Health Canada License

PRIMUS sterilizers represent state-of-the-art technology, built to the highest standards thanks to employees who have a strong work ethic and dedication to craftsmanship. Quality products and personal service is first and foremost with PRIMUS.

PRIMUS has earned a reputation for offering the premier sterilizer on the market!

***“PRIMUS Sterilizer...
...Quality by Design, Excellence by Choice”***

Three 26” x 63” Pit-mounted Units

***QUALITY AND INTEGRITY FORM THE FOUNDATION OF
PRIMUS STERILIZER COMPANY
OUR VISION FOR CONTINUAL IMPROVEMENT IS REALIZED
THROUGH THE ESTABLISHMENT OF QUALITY OBJECTIVES
ACHIEVED THROUGH TEAMWORK WITH A GOAL OF
RETURNING SIGNIFICANT VALUE TO OUR CUSTOMERS.***
