Measure Nearly Anything.
Accsense offers a range of wireless Sensor Pods with internal sensors and connections for external sensors that measure virtually anything.

Transmit Information Anywhere.
Your measured data is transmitted via the internet, logged on Accsense's secure servers and made available to you on a secure Web account. Sign in and quickly retrieve reports, graphs and set alarms that are delivered via email and phone anywhere in the world.

Scale Your System.
Accsense systems are infinitely scalable. You can monitor multiples sensors at a single point, and monitor multiple points or even multiple facilities. With Accsense's secure central data storage, alarms and reports can be based on comparisons of sensors, even from different locations or on deviation from historical averages or ranges.

Get Powerful Information.
Accsense's out-of-the-box solution fits into, and helps your processes in minutes. Retrieve data from miles away, and keep track of sites outside of your physical reach. With Accsense there are no boundaries. Obtain the information you need, now - from anywhere.

Advantages of Continuous Monitoring.
Continuous monitoring means you can sleep better because your Accsense system is watching, all the time. Instead of worrying about frozen inventory or wasting time with manual logs, know that you will be alerted of an anomaly immediately. Accsense systems offer variety of alarm logic and reporting options. Simple alarms and reports can be configured and enabled in less than one minute, with more complex logic available for experienced users.

Rapid Payback.
The immediate availability of critical information makes the payback time on a basic Accsense system as short as days, yet the Accsense system can grow with your business to become a true partner of your efficiency and quality operations.

Comply With Regulations.
Quickly assists with regulatory compliance. Meet your FDA, HACCP, JCAHO,AABB, ISO 17025 and ASHRAE guidelines - or standards for almost any industry. We can also help organizations where FDA CFR 21 Part 11 is important. Accsense's rapid set up allows you to streamline your processes and comply with regulations within minutes - providing you with accurate data when you need it.

Accsense Web Services - No Software to Install or Manage.

Data Integrity & Security
• Accsense has taken every precaution, including data encryption and other safeguards, to ensure data privacy and integrity.

24/7 Monitoring
• Accsense servers constantly monitor the health of your system. If any problems, including a loss of communication, are detected, you are notified immediately.

Guaranteed Server Uptime
• Accsense servers operate at 99.9% uptime.

We're here to help you make accurate sense of your world.
Accsense has already helped hundreds of people in the food processing, pharmaceutical, medical and machinery monitoring industries - let us help you streamline your processes, comply with industry standards and get the information you need, now.
